

# THE INDUSTRIAL ATHLETE DIGEST

Weekly Wellness & Safety Tips from Work Right NW

## STRONG SHOULDERS, STRONGER KEN

BY AARON WEIDMAN, MS, ATC, CEAS

VOLUME 10 | ISSUE 25

Men's Health tends to be a bit like Fight Club. How, you ask? Well, the 1st and 2nd rule of Men's Health are similar to those of Fight Club - "You do not talk about Men's Health!" We're working on breaking through the stigma of that rule this month and recognizing the need for discussing the ever-present need to prioritize our health. This week, it's shoulder health. Our shoulders are such a unique joint in the body because they are so mobile yet so unstable.

### SHOULDERING THE BURDEN

Think of your shoulder like a golf ball sitting on a tee, but that's just one of the 4 joints that make up our shoulders (GlenoHumeral - GH, SternoClavicular - SC, AcromioClavicular - AC, and Scapulothoracic - ST). In order for your shoulder to function properly, you

need all 4 of those joints to be in tip top shape. So let's get you there with some Ken-jury prevention tips and tricks to help the industrial athlete both at work and at home.

#### Elbows In & Thumbs Up When Reaching

- One of the core principles of PREPARED ergonomics - this arm position will keep your shoulder in the optimum position and out of the impingement zone.

#### Sleeping Position

- Try to avoid a sleeping position that elevates your arms overhead especially if you're sleeping on your side. Keep your arm out from under your pillow to avoid all that abduction and internal rotation which can cause impingement. We spend 6-8 hours per night sleeping and if the shoulder is constantly in an impinged position, we are setting ourselves up for injury.

#### Strengthening

Not only will this help prevent injuries, it will also provide you with sculpted shoulders that will look great while wearing those cut off shirts.

- Is, Ys, and Ts - This set of exercises will help stabilize your scapula and allow your shoulder joints to move properly.

- Theraband Pullover - Working on balance when it comes to shoulder strength. You can't just work on those show muscles.
